1. Inductance tested at 0.25V. Tolerance of inductance: $\pm 20\%$.
2. DCR test temp. limits 25 °C.
3. This indicates the value of current when the inductance is 10% lower than its initial value at D.C. superposition or D.C. current.
4. To load current onto the components under normal ambience which cause the temp. change as $\Delta t=40$ °C or more lower current.
5. Please refer saturated current or the minimum temperature current as standard.
