OWIH4312 Inductance decrease by current

OWIH4312 Temperature rise by current

1. Inductance tested at 0.25V. Tolerance of inductance:  $\pm 20\%$ (M)
  2. DCR test temp. limits  $25^\circ\text{C}$ .
  3. This indicates the value of current when the inductance is 10% lower than its initial value at D.C. superposition or D.C. current.
  4. To load current onto the components under normal ambience, which cause the temp. change as  $\Delta t=40^\circ\text{C}$  or more lower current.
  5. Please refer saturated current or the minimum temperature current as standard.
